

# Interpretation of Emergent Communication in Heterogeneous Collaborative Embodied Agents

Shivansh Patel\*, Saim Wani\*, Unnat Jain\*, Alexander Schwing, Svetlana Lazebnik, Manolis Savva, Angel X. Chang

<http://shivanshpatel35.github.io/comon/>

## Contributions

1. Study different communication mechanisms in multi-agent settings
2. Interpret the studied communication mechanisms

## Multion

Navigate to an ordered sequence of target objects placed within the environment

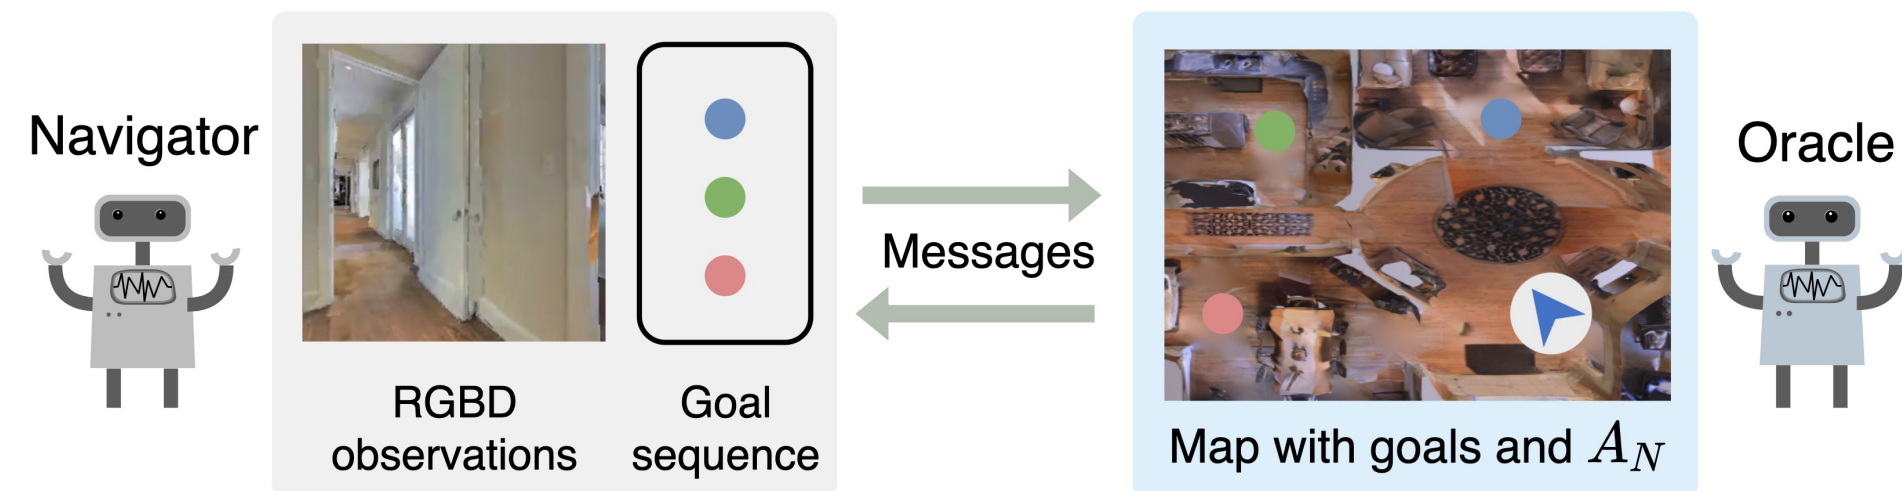

**Input:** RGBD observations and sequence of target objects

**Output:** actions

**Assumptions:** perfect localization, sensors, actuation

## CoMON

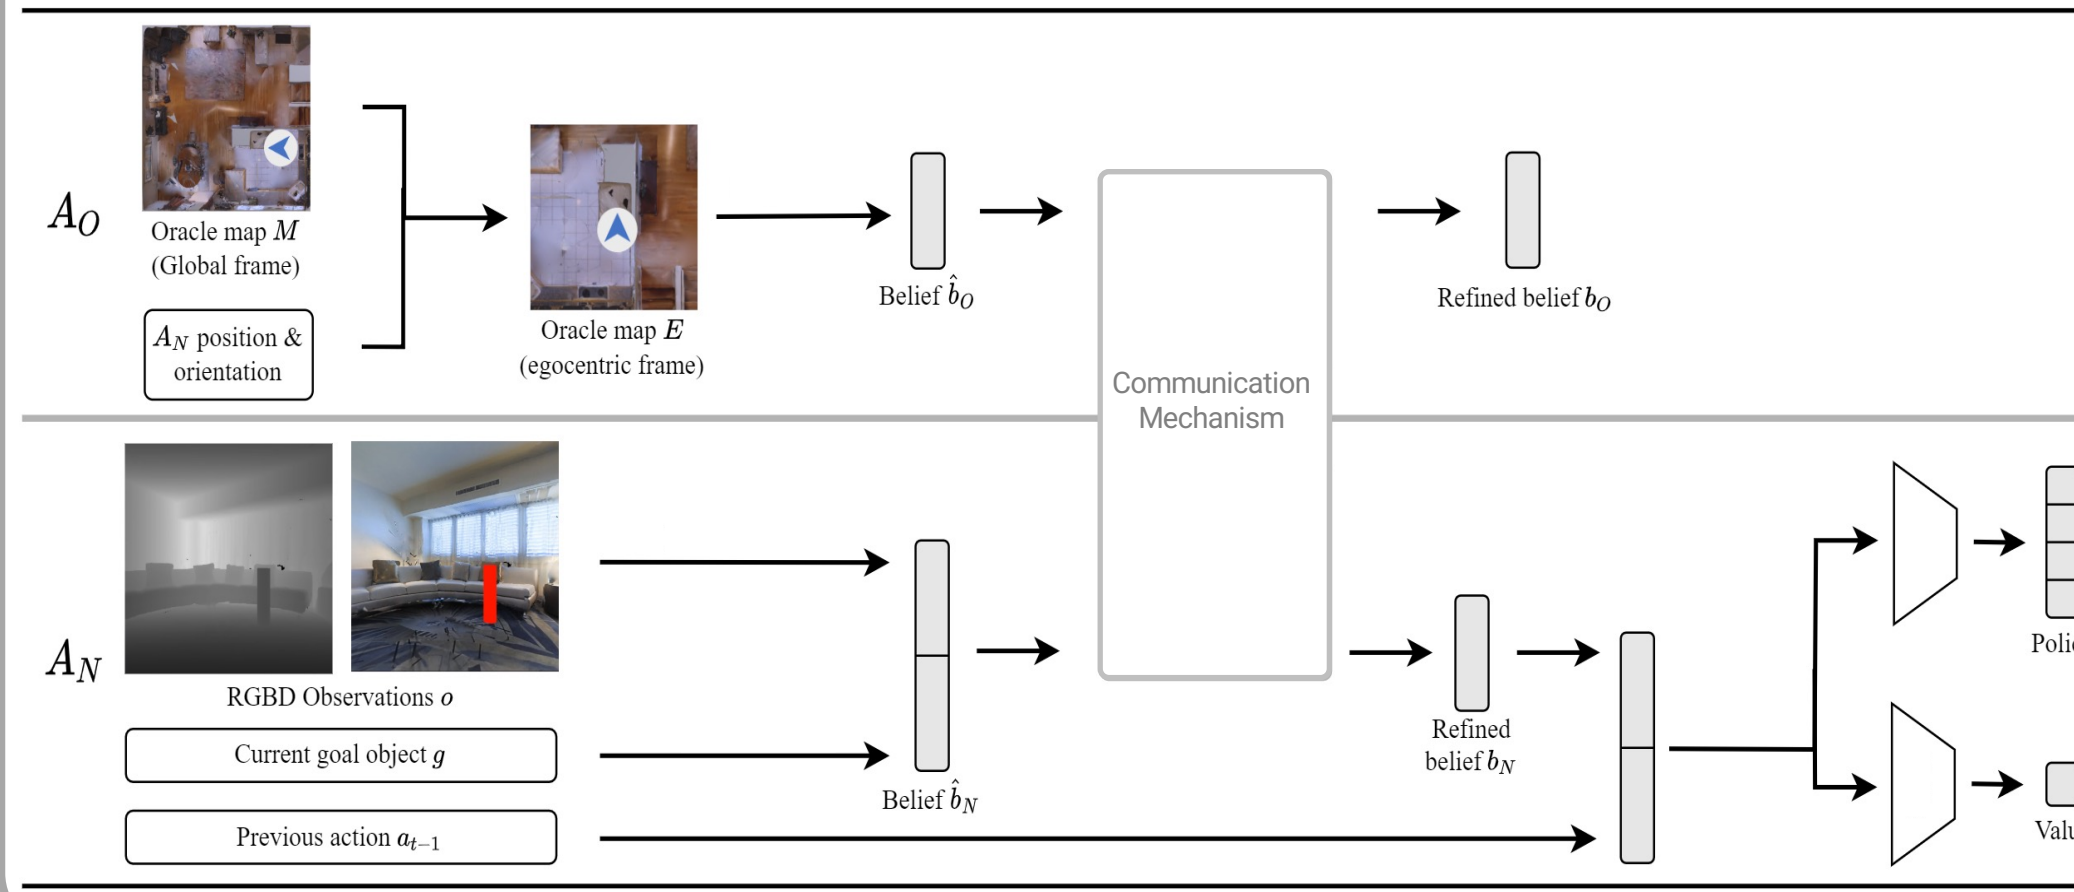

- Navigator has to navigate to a sequence of target objects
- Oracle has access to top-down map with goal locations and navigator
- Agents can coordinate by sending messages to each other

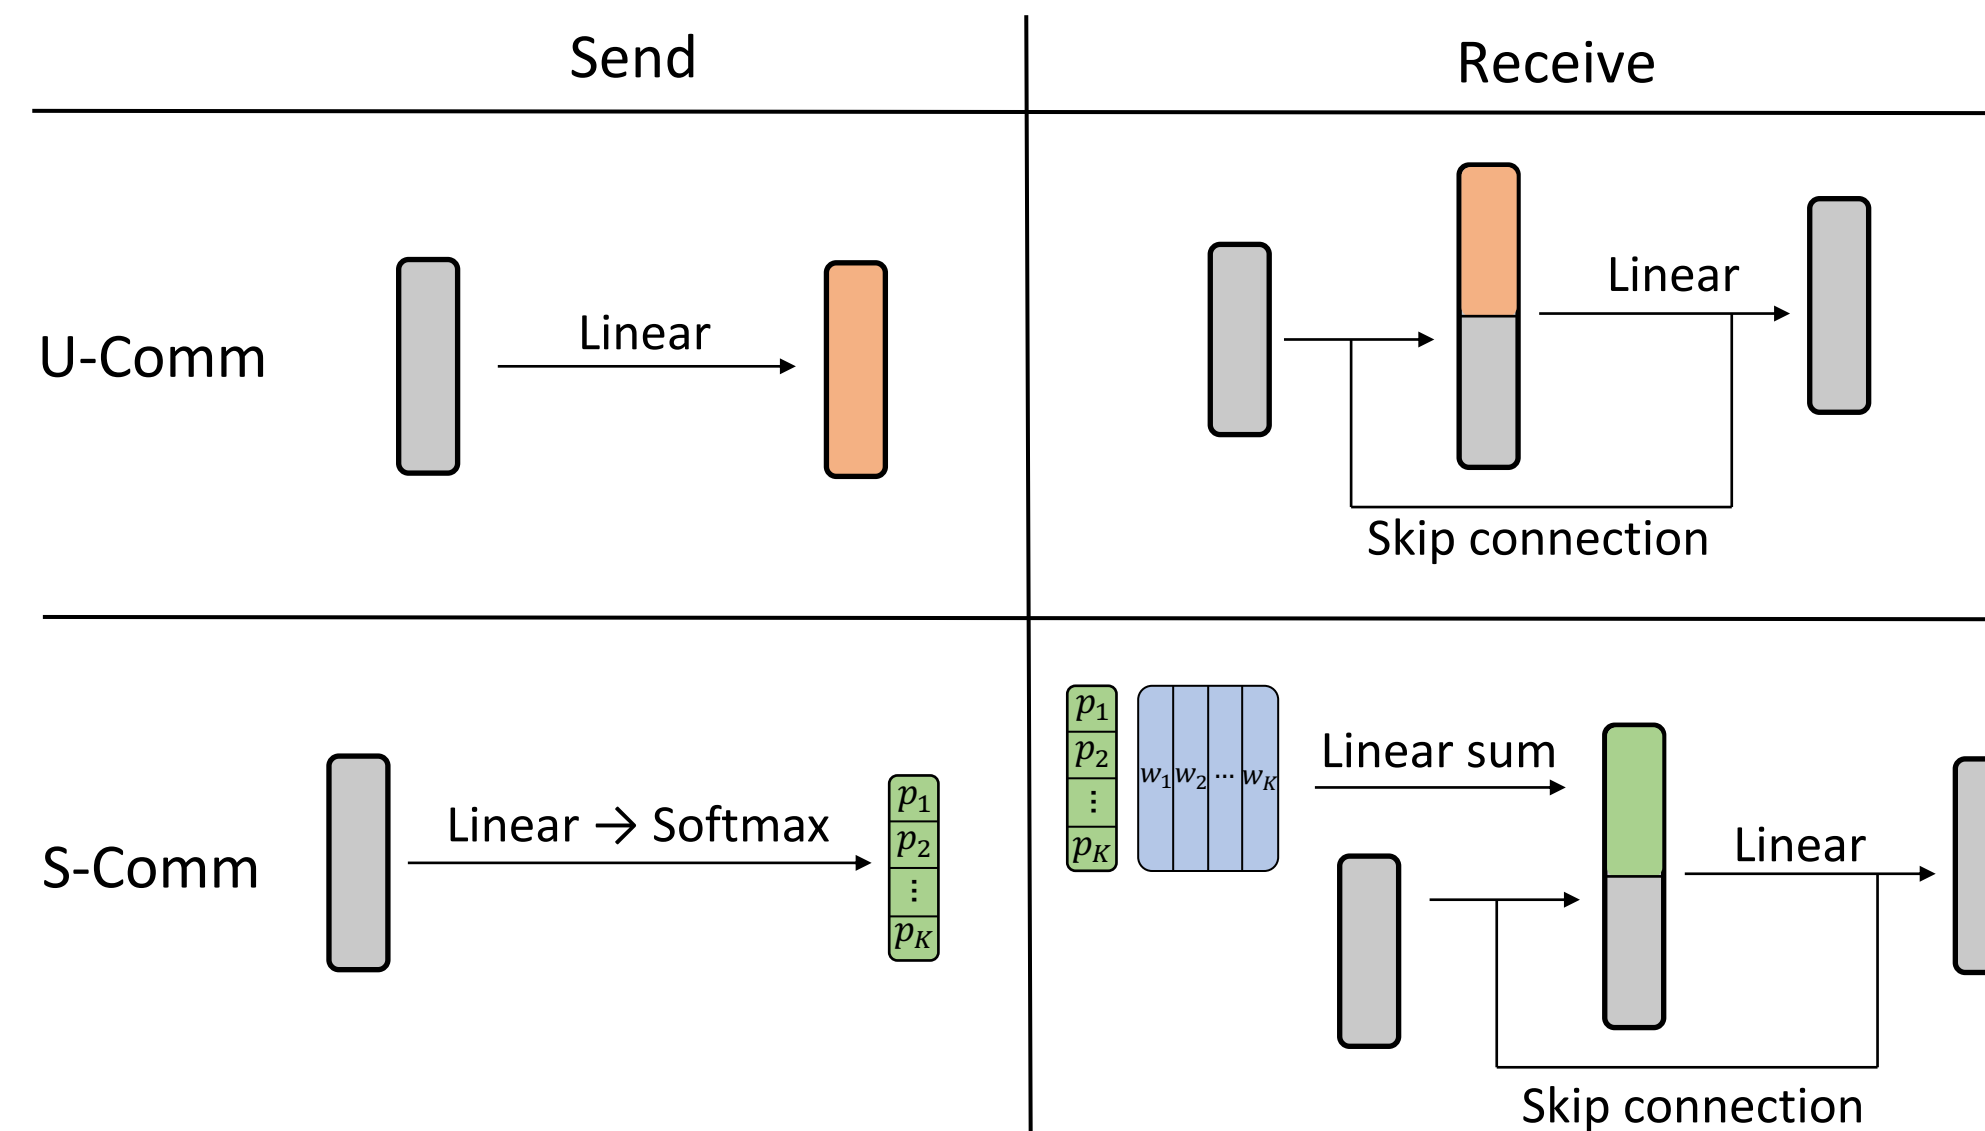

## Conclusions

- Structured communication agent outperforms unstructured communication agent in navigation
- Structured communication agent come close to matching the success rate of central agent
- Messages akin to 'I am looking for red goal' emerge
- Both communication mechanisms lead to emergence of egocentrically grounded messages

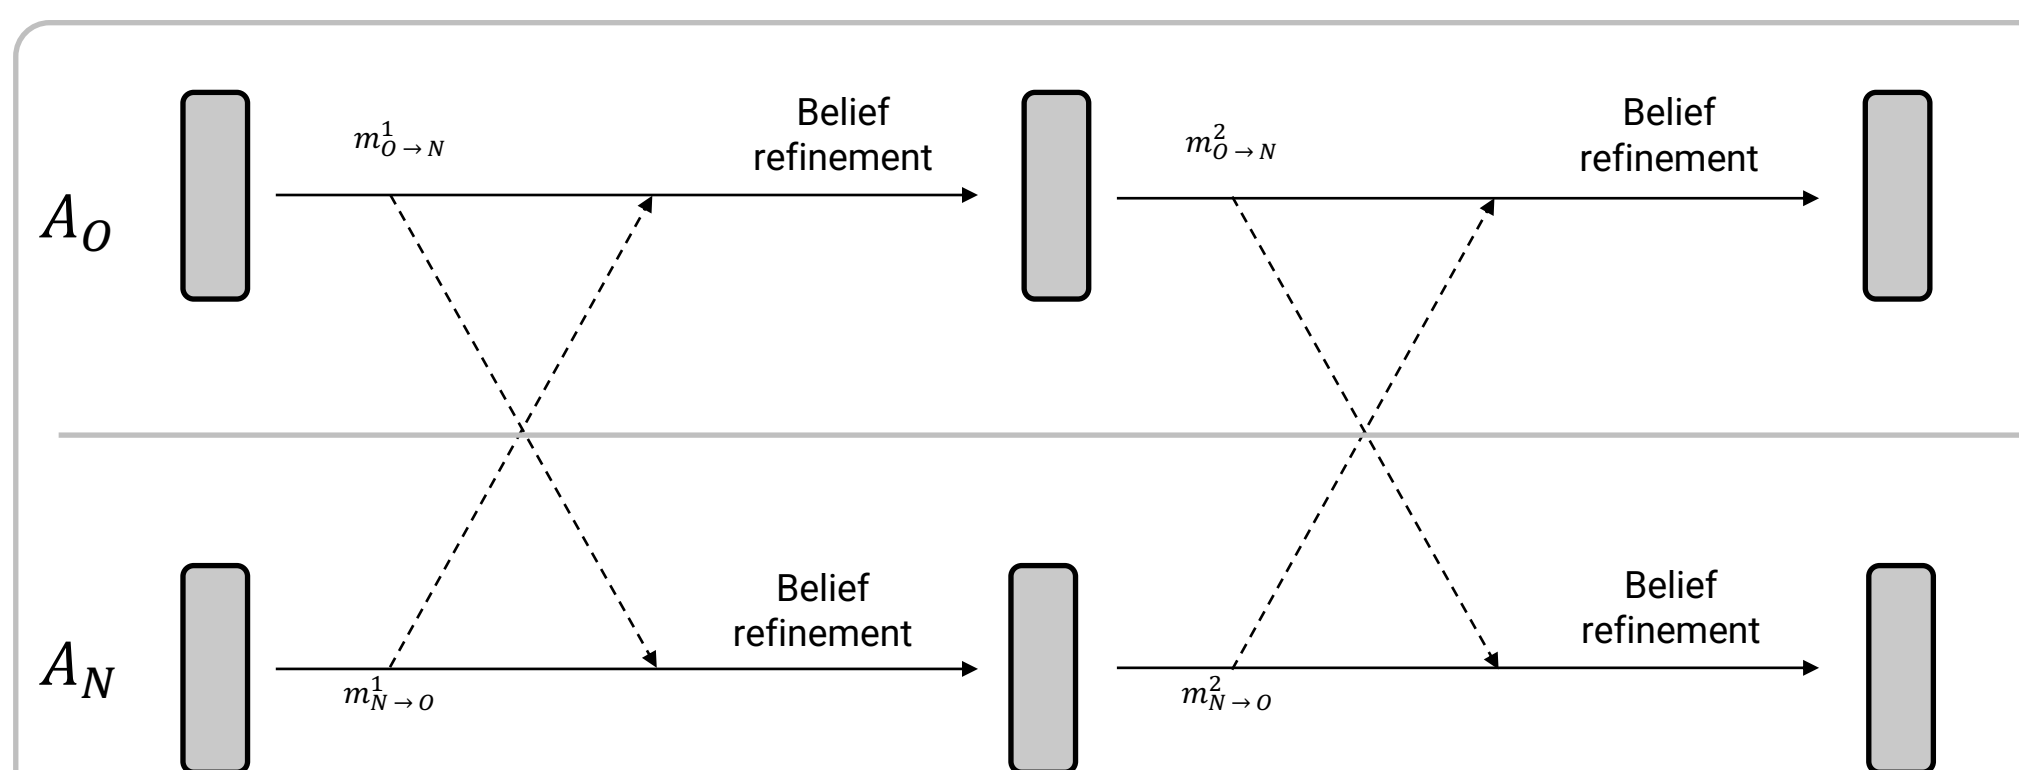

## Agent Architecture

## Communication Mechanisms

## Messages Exchanged

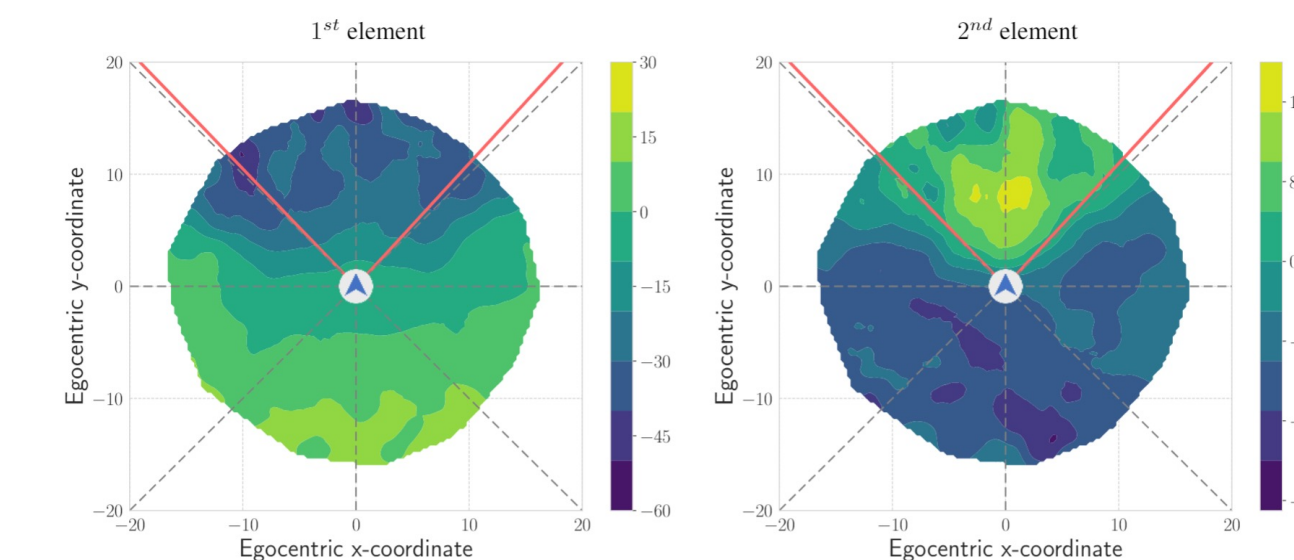

## U-Comm Interpretation

$m_N^1 \rightarrow o$

$m_o^2 \rightarrow N$

## S-Comm Interpretation

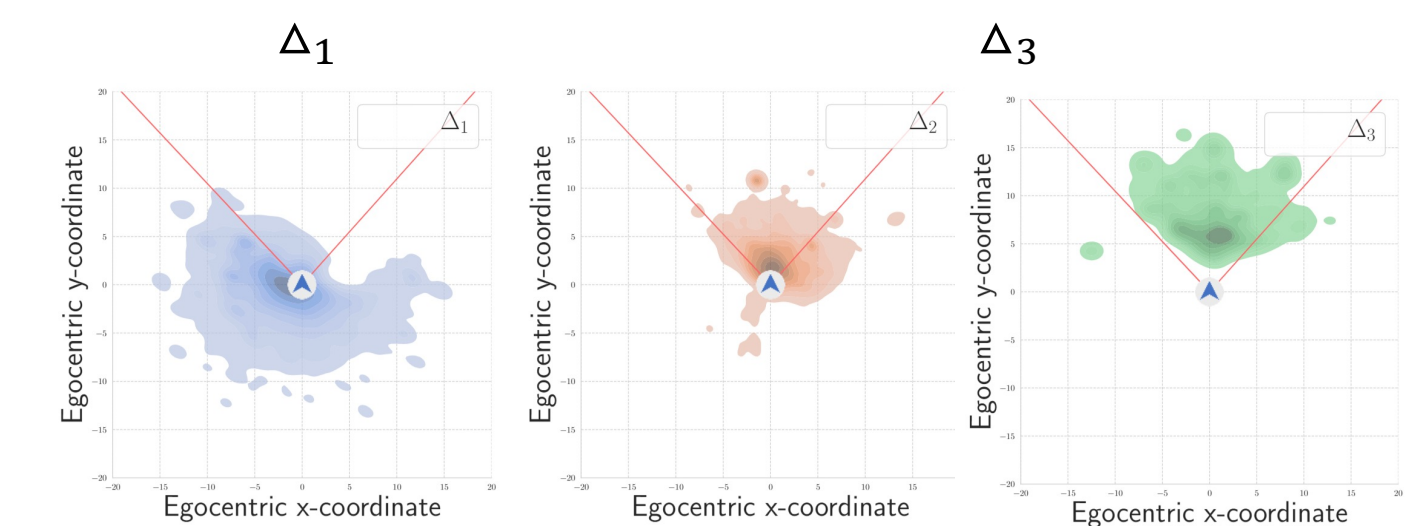

Binning of probabilities

$m_N^1 \rightarrow o$

$m_o^2 \rightarrow N$

## Quantitative Results

	PROGRESS (%)			PPL (%)		
	1-ON	2-ON	3-ON	1-ON	2-ON	3-ON
U-Comm	87	77	63	60	51	39
S-Comm	85	80	70	67	59	50
OracleMap	89	80	70	74	64	52
